SUMMARY

Software engineer with internship experience building secure, multi-tiered web applications using **Java Spring Boot**, Node.js, and React, backed by relational (**MySQL**) and NoSQL (**Redis**, **MongoDB**, **PocketBase**) data stores. Strong foundation in OOP, REST API design, Agile Scrum delivery, and automated and performance testing (JUnit, JMeter). Applies secure-coding principles (OWASP Top 10, JWT, RBAC, audit logging, rate limiting) and Docker-based reproducible builds — directly aligned with Enterprise Architecture's focus on foundational platforms, governance, and compliance. **600+ day LeetCode streak; 1000+ problems solved.**

TECHNICAL SKILLS

Languages	Java, JavaScript, Python, SQL, HTML, CSS
Frameworks	Spring Boot, Spring Security, Spring Data JPA, Spring Validation, JWT, React.js, Node.js, Thymeleaf
Distributed Systems	REST API design, multi-tier architecture, Redis caching, rate limiting, retry/backoff, concurrency
Databases	MySQL (relational); MongoDB, Redis, PocketBase (NoSQL)
Testing & Quality	JUnit, Postman, JMeter (performance), automated functional testing, code reviews
DevOps & Tools	Docker, Git, GitHub, Linux, Maven, IntelliJ, VS Code
Security	OWASP Top 10, JWT/OAuth, input validation, RBAC, audit logging, secure coding
CS Fundamentals	OOP, DSA, System Design, DBMS, Operating Systems, Computer Networks
Methodologies	Agile Scrum, Kanban, sprint planning, code-review culture

WORK EXPERIENCE

Software Developer Intern — Fleet Studio Aug 2025 – Present

- Designed a Node.js authentication service with custom rate limiting and server-side input validation, applying OWASP Top 10 secure-coding principles to protect sensitive user data and prevent API abuse.
- Diagnosed and eliminated N+1 query patterns in PocketBase via eager loading, reducing endpoint latency and database load on read-heavy paths.
- Migrated production workload (Linode) from Ubuntu to Alpine, hardening the runtime surface (fewer installed packages) and lowering monthly infra spend by \$5 — an example of governance-driven infrastructure choices.
- Reviewed pull requests and contributed to internal coding standards; collaborated cross-functionally with design and product on user-facing flows.

Java Full Stack Developer Intern — Infosys Springboard Dec 2024 – Feb 2025

- Built multi-tier full-stack applications with Java Spring Boot, Thymeleaf, and MySQL; modeled domain entities using OOP (encapsulation, inheritance, interface-driven design).
- Delivered features across 4 Agile Scrum sprints — daily stand-ups, sprint demos, and retrospectives in a cross-functional team.
- Implemented Spring Validation and server-side checks for reliable, privacy-respecting data handling across forms and REST APIs.

Java Full Stack Developer Intern — Null Class Nov 2024 – Dec 2024

- Built a React.js + Spring Boot application with cleanly layered controller / service / repository architecture and JPA-backed MySQL persistence.
- Designed RESTful APIs with Spring Validation for data integrity; authored JUnit tests to support reliable, repeatable releases.

PROJECTS

Employee Suggestion & Workflow Platform

Spring Boot, React, MySQL, Redis, JWT

- Built a secure internal platform for submitting, reviewing, and auditing suggestions with strict role-based access control — a pattern directly applicable to regulated, governance-heavy enterprise workflows.
- Implemented JWT authentication, admin/employee role separation, audit-friendly logging, and validation at every layer.
- Added Redis caching to reduce DB load and Leaky-Bucket rate limiting to harden APIs against abuse.

URL Shortener with Analytics

Spring Boot, React, JWT, MySQL, Docker

- Built a secure URL shortener with JWT authentication, custom aliases, click tracking, and auto-expiration.
- Containerized with Docker for reproducible builds and consistent environments across local, CI, and production.
- Delivered a WCAG 2.1 AA accessible UI with semantic HTML, ARIA labels, and keyboard navigation.

Scalable Profile Extraction System

Python, Tor, Headless Browser

- Designed a fault-tolerant distributed pipeline replacing paid third-party APIs (recurring savings of \$3–5 per 1000 lookups).
- Applied system-design techniques: concurrent Tor instances, round-robin IP rotation, retry/backoff, and a resource-aware headless browser pool.

Care & Cure — Hospital Management System

Spring Boot, Thymeleaf, MySQL

- Modeled Admin / Doctor / Patient roles using OOP with role-based access control and clean service boundaries.
- Implemented secure login, server-side validation, and least-privilege views over sensitive patient data; tuned MySQL queries to reduce response time.

EDUCATION

B.Tech, Information Technology — Velammal Engineering College, Chennai

2022 – 2026 · CGPA 8.5

CERTIFICATIONS & ACHIEVEMENTS

- AWS Cloud Practitioner Essentials — AWS
- Docker for Java Developers, Spring Boot Fundamentals, Java for Programmers — Udemy
- Linux and SQL — Coursera
- **600+ day LeetCode streak; 1000+ problems solved**
- 1st Place — COGNEBULA '25 (Velammal EC), GLITCHED Hackerz (CIT), Code Twisters Xtfest 6.0 (SSEC), INMATRIX'24 (VIT)
- Hackathons: Code Volt '25 (VIT × Zoho), Velammal Hackathon 1.0, IGNITRON'24, Blockathon '24
